

Supplementary Table S2. Overview of all the proteins identified for the EGFR del-SH-TAP half pulldown series of experiments. Total protein inputs were (A) 25, (B) 12.5, (C) 5 and (D) 2.5 mg. Percentage of injected eluate volume ranged from 0.25 to 33%. Keratins have been excluded, trypsin is shown in grey. PCT (peptide counts), SCT (spectral counts), SCV (percent sequence coverage), SD (standard deviation), CV (coefficient of variation).
